

BE PART OF THE PIPELINE!

Growers can apply to join our pipeline of organisations that are eligible to benefit from the project. You will then be kept regularly updated on the project progress and will have the opportunity to participate in learning and showcasing events where appropriate.

If selected from the pipeline for inclusion within the project, we will ask you to sign a Collaboration Agreement that sets out the basis of your involvement.

This may include provision of advanced wireless connectivity from our contracted telecoms supplier for a defined period. This may be at a reduced rate or/at potentially no cost to you, in exchange for a commitment to showcase your deployment of technology across your business.

Other activities could include:

- allocating a specific area of your site for hosting demonstrations to interested parties
- working with the supplier and colleges to trial new applications and devices
- sharing data collected for analysis
- creating content for information sharing and dissemination via visual and in person presentations
- social media and audio/video.

We will also ask you to contribute to regular reporting that WSCC will undertake to the funders, DSIT, on progress and learning from the project.

For information and to apply to join us email
